

## Science Room Refurbishment

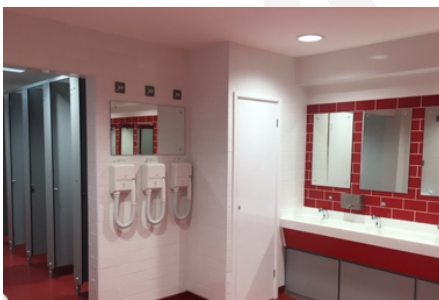

We are pleased to advise that the Schools Challenge Cymru funded project for 2015-2016, to create a new Science laboratory, has been completed ahead of schedule. The classroom is now fit for purpose and will help serve 21st century learning.

## New female washroom facilities

As part of the LA's 50:50 capital investment scheme, the school is pleased to have refurbished its girls' toilets and washroom facilities in the old building.

The new design sees an increase in the space provided and the quality of the fixtures and fittings have been appreciated by our female students.

## Canopies

The school has installed two large canopies outside of the new Science room in order to enhance the outside space and provide shelter to pupils in the event of inclement weather.

## Sixth Form

The sixth form students are delighted with their own custom built classrooms and offices offering them a quality environment for both learning and self-study.

## Music Rooms

The school has invested in its Music department by creating two new music rooms complete with new designated peripatetic music areas.

As part of the school's development of its Creative Arts faculty a new purpose built Art room has been created along with an animation studio and Sixth Form independent study base.

## Music Portacabin

Developing an appreciation of the Arts is vitally important to create well rounded students. As part of the school's desire to expand musical opportunities a bespoke Music room and practise rooms have been built. This has helped to suite the Creative Arts faculty together and enhance provision at St Martin's.

## Refurbishment of classrooms

St Martin's School is housed in a beautiful environment. The original school building created in 1928 has been undergoing a generous restoration. The original parquet flooring has been renewed in a number of classrooms to ensure all our students can be educated in the most positive of learning environments whilst protecting the schools heritage for future generations.

## School security

To enhance school security we have recently installed vehicle and pedestrian access gates at the entrance to Hillside. This has enabled us to segregate pedestrian and vehicle access to safeguard students and staff. It has also helped traffic flow for our neighbours at Hillside.

## Gasworks

Following months of disruption we have installed a completely new gas service to the school. Our students and staff responded exceptionally well whilst we fully upgraded supply to the school. 1928 pipes have all been removed and replaced by the latest designs, making us modern and efficient.
